Benefit of modeling H3:

- Minimize steric clashes
- Optimize dihedral bond angles

Drawbacks of modeling H3:

- Increase computation time substantially
- Limited to modeling an H3 loop of no more than ten residues

RosettaAntibody Tutorial

Today's Model: 3O2W

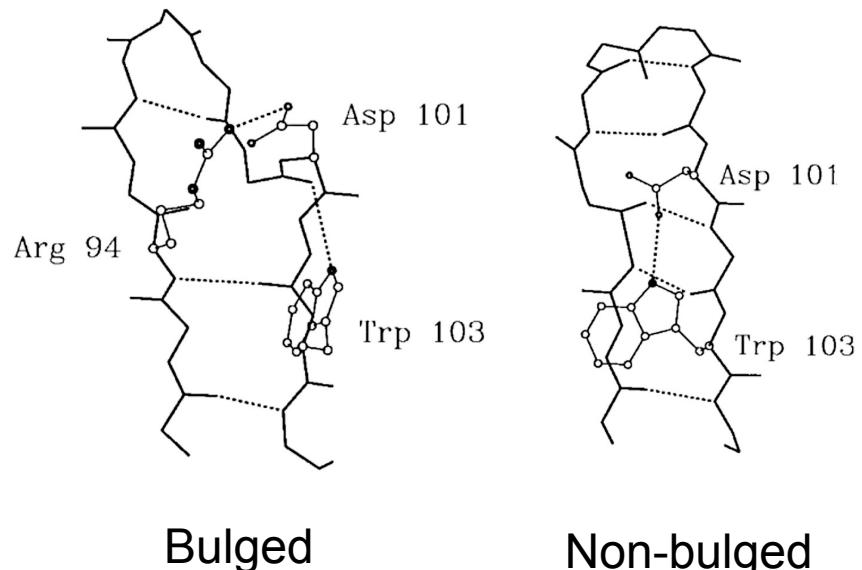

19E F_v mutant in complex with a transition state analogue

First Task: Go through the RosettaAntibody3 downloaded output to assess accuracy of model predictions

Second Task: Go through finished public Rosetta Antibody jobs to understand output

Assessing Model Quality

- RMSD to starting structure
 - Predicted RMSD of < 1.5 Å ideal
- Conserved $V_H - V_L$ interactions
 - L36 interaction with HCDR3
 - L46 or L49 interaction with HCDR3
- Bulged v. non-bulged conformations
